

## AMENDMENTS TO THE SPECIFICATION

**Please amend the specification as indicate:**

**On page 2, line 16:**

“requires complicated operation ~~of~~ by the operator and thus raises the concern”

**On page 18, please make the indicated corrections in the second full paragraph:**

Roller pump 302 serving as a solution injection device and ~~Attachment~~ attachment block mechanism 305 are positioned in order from the trailing end to the leading end of attachment tube 302. They are also connected to integrative control circuit 106 (not shown). Roller pump 304 injects saline W in solution tank 301 into a patient. Attachment block mechanism 305 presses and blocks attachment tube 302 to freely open or close attachment tube 302. Integrative control circuit 106 causes ~~Attachment~~ attachment block mechanism 305 to release the blocking only when connection switch mechanism 105 blocks patient tube 101, and causes roller pump 304 to operate only when the blocking by ~~Attachment~~ attachment block mechanism 305 is released.
